

TYREPACK

PROFESSIONAL WHEEL SHIPPING
SUSTAINABLE. SAFE. PROFITABLE.

**RENT YOUR
TYREPACK!**

No purchase,
no deposit.

THE PROBLEM

- You sell either a new or used car
- A leasing vehicle must be handed over or returned
- You change the wheels for your customers and they want to keep the second set of wheels
- You sell new or used wheels online

**HOW DOES THE SECOND
SET OF WHEELS GET TO
THE CUSTOMER?**

Transporting unsecured wheels in the trunk or on the back seat is prohibited:

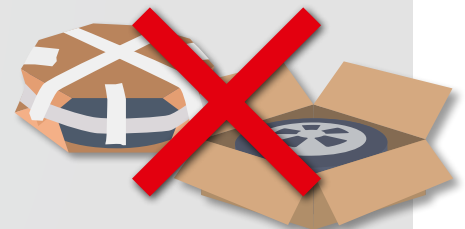

Transporting unsecured wheels in a passenger car not only poses a risk but also violates the statutory regulations. **According to § 22 German Road Traffic Act**, the load in a vehicle must be secured in such a way that it cannot slip, topple, roll back and forth even during emergency braking or sudden evasive manoeuvres, fall down or generate avoidable noise. *Source: ADAC*

Shipping by parcel service would be an option if...

...the packaging instructions weren't so time-consuming and tedious: Either making a package out of old cardboards with lots of sticky tape or buying special cardboard packaging.

Manual packaging easily takes 30 minutes – provided that the material is at hand and does not have to be ordered first.

Or loading on pallets for dispatch via trucking company?

Typically, delivery is ex curb only and residential streets are increasingly hard to reach by truck. Furthermore, the recipient must dispose the pallet and waste.

THE SOLUTION

PACKAGE AND SHIP **YOUR WHEELS WITH TYREPACK**

The sturdy packaging does not only avoid waste due to its reusability, but also perfectly protects the expensive wheel rim. In 20,000 shipments, we have a damage quota of practically zero!

Our standard size accommodates about 90% of all passenger car tyres. For extra-large tyres (e.g. for SUVs) we offer TyrePacks XL.

Once you order TyrePacks, we make sure that you receive the desired amount of empty packages. You load the wheels in the packages, we organise and supervise the transport to the recipient via parcel service.

In addition, we make sure that the packages are picked up at the recipient's. And: TyrePack bears the risk of loss. The only prerequisite is that the recipient has been informed in advance about the shipment and the corresponding return obligation as well as about our website: www.tyrepack.com.

SHIPPING TYRES HAS NEVER BEEN SO EASY!

The packaging time saved alone makes TyrePack profitable – packaging takes 4 minutes per wheel set, even for inexperienced users (30 minutes with cardboards).

Furthermore, using TyrePacks reduces not only waste, but also around 80% of the CO2 emissions.

This is a major benefit for your customer loyalty and satisfaction.
